

## GALDOLLY Installation instructions:

1. Turn machine upside down.
2. Install Dolly, making sure the ear for the belt cover goes in notch on dolly (see picture #1). Be sure spring pin fully latches.
3. Using 2) ½” wrenches, loosen bolt & nut in back corner.
4. Push dolly forward & toward belt guard as far as it will go.
5. Push bolt into corner (back & away from belt guard- see picture #2) & tighten.
6. Make sure dolly will not come off without being unlatched by pulling outward on front axle & left side. If dolly can be moved enough to unlatch tabs from sides of machine, readjust.
7. Remove & reinstall dolly to be sure it fits properly.
8. Now the dolly is ready to use. It can be installed by tipping the machine forward, rolling the dolly underneath, and either pulling the machine back on the dolly, or lifting the dolly up to latch it on the machine.

Note: due to the variation in machine castings, the dolly may need to be adjusted differently for each machine.
